JAVA
LESSON 1

ENVIRONMENT SETUP

CONTENT

01 INSTALL JDK

02 INSTALL AN IDE

03 PRACTICE

INSTALL JDK

Java Development Kit (JDK): A software development environment used for developing Java applications.

Importance: Provides the necessary tools (compiler, debugger, etc.) to write, compile, and run Java programs.

https://www.oracle.com/java/technologies/downloads/

After installing, set up the environment variables (JAVA_HOME, PATH).

INSTALL JDK

Windows:

1. Open the Start menu, search for "Environment Variables", and select "Edit the system environment variables".

2. In the System Properties window, click on "Environment Variables".

3. Under System Variables, click "New" and add JAVA_HOME with the path to the JDK installation directory (e.g., C:\\Program Files\\Java\\jdk-14).

4. Find the Path variable, click "Edit", and add %JAVA_HOME%\\bin to the list.

INSTALL JDK

macOS/Linux:

1. Open the terminal.

2. Edit the .bash_profile or .zshrc file using a text editor (e.g., nano ~/.bash_profile).

3. Add the following lines:
   - export JAVA_HOME=/path/to/jdk
   - export PATH=$JAVA_HOME/bin:$PATH

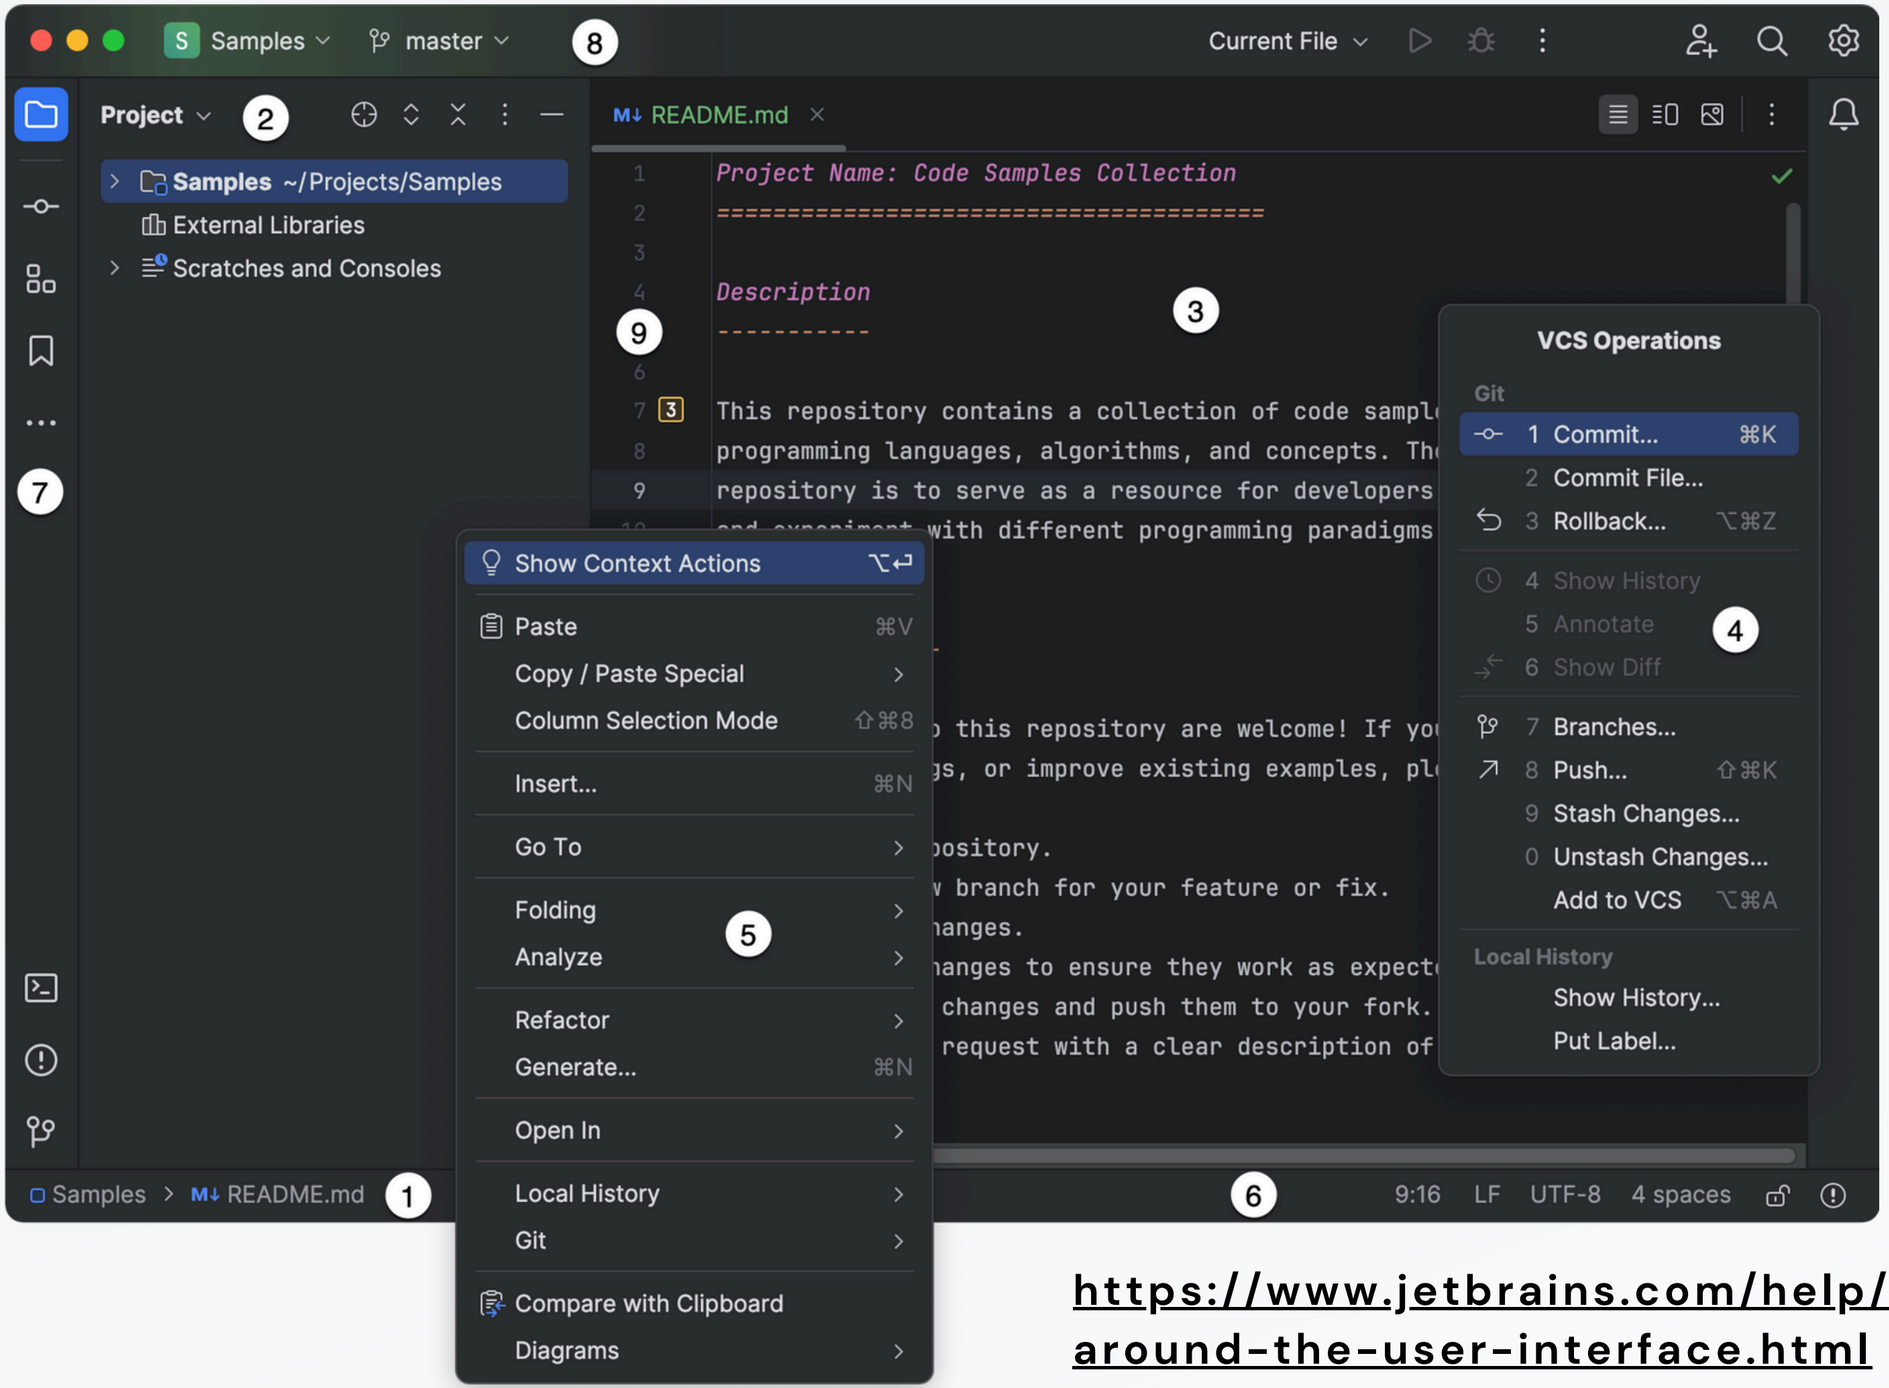
4. Save the file and run source ~/.bash_profile or source ~/.zshrc.

INSTALL AN IDE

Integrated Development Environment (IDE): A software application that provides comprehensive facilities to computer programmers for software development.

Importance: Simplifies coding, debugging, and testing by providing tools and features like code editors, compilers, debuggers, and project management.

https://www.jetbrains.com/idea/download/



1. Navigation bar
2. Project tool window
3. Editor
4. Popup menu
5. Context menu
6. Status bar
7. Tool window bar
8. Toolbar
9. Gutter

https://www.jetbrains.com/help/idea/guided-tour-around-the-user-interface.html

PRACTICE

1. Verify JDK installation by compiling and running a simple Java program via command line.

2. Create and run a "Hello World" program in IntelliJ IDEA.

3. Set up a project structure in IntelliJ IDEA.
